

AUSTRALIAN SOCIETY OF EXPLORATION GEOPHYSICISTS

A.C.N. 000 876 040

Exploration Geophysics

NOTICE TO CONTRIBUTORS

Papers are published in *Exploration Geophysics* which report the results of significant case histories, reviews, and relevant research in geophysics, with emphasis on application to the Australian and similar environments. Responsibility for all statements made in *Exploration Geophysics* lies with the authors. Papers accepted become the copyright of *Exploration Geophysics*, that is of the Australian Society of Exploration Geophysicists.

Authors are responsible for obtaining permission to use figures and tables previously published in other books or journals. Letters of the copyright holders granting permission should accompany the manuscript. It is also the responsibility of the author to check reproduced materials against the originals for absolute accuracy.

Style of papers

All contributions to the Journal should be written in English. Style should conform to the SEG *Geophysics* Instructions to Authors (January each year or see the SEG web page <http://www.seg.org/>, or the *Encyclopedic Dictionary of Geophysics*). Spelling should follow the latest edition to *The Concise Oxford Dictionary*. In the case of both spelling and style, Australian usage will be preferred where it differs from the SEG guide. Minor sub-editing is done by the editorial team to make a manuscript consistent with 'house style' or to make its contents clearer to the non-specialist reader; if extensive alterations are required, the manuscript will be returned to the author for revision.

Reviewing

Exploration Geophysics is a fully peer-reviewed journal. Authors are invited to nominate possible reviewers when they submit their manuscripts, to help the editorial team locate appropriate colleagues. The editors retain the right to choose reviewers, however.

Manuscripts

Either:

Four copies of the manuscript (papers, case histories; reviews, etc.) each including all tables and figures, should be sent to the Editor, c/- ASEG Secretariat (see the Office Bearers page at the beginning of *Exploration Geophysics*). The manuscripts should be typed double-spaced on one side of the paper only, with ample margins. All pages must be numbered consecutively in the top right-hand corner, including pages with acknowledgements, references, tables and figure legends. Authors should retain one copy of text, tables and illustrations, as the Editor cannot accept responsibility for loss or damage to typescripts.

Or:

One paper copy of the manuscript (as above), and one PDF copy on CD-ROM, each including all tables and figures, should be sent to the Editor, c/- ASEG Secretariat (see Office Bearers page at the beginning of *Exploration Geophysics*). The manuscript should be prepared as recommended in the previous paragraph. Please ensure that the paper copy shows all special symbols and so on as you expect them to be read. Please ensure that the PDF file is prepared with all fonts embedded.

The typescript should be arranged in the order: title page, abstract, key words, introduction, materials and methods, results, discussion, acknowledgements, references, tables, figure legends, figures.

Manuscripts should be dated on the title page, and this date changed when the manuscript is revised.

Manuscripts supplied on disk

Initial submission may be in paper form, or as a PDF file on CD-ROM with a paper copy, as above.

Source files should not be sent with the initial submission of manuscripts. When the paper has been accepted for publication, after revision as necessary, authors should supply the text and figures in digital form on 3.5 inch floppy disk, or on CD-ROM. The text is preferred in MS Word, but most word processing files can be read but must be identified. If not in MS Word, an ASCII or rich text format (rtf) file should be provided as well. Detailed mathematics are preferred in MS Word, using Equation Editor 3 or earlier only. Where figures are supplied in digital form, these *must not* be embedded in the text. See "Tables, figures and illustrations" (below) for more details.

At the time of writing *Exploration Geophysics* cannot handle LaTeX files.

Manuscript Layout

Two documents are available to assist authors. The file `eg_template.dot` is a MSWord document template containing the necessary and sufficient styles for a manuscript for review. The file `eg_sampler.doc` is a MSWord document containing comments, suggestions, and examples of usage, using the same styles and layout, extending much of what follows.

Title page

The front page of the manuscript should be a title page, showing authors' names and addresses in column format, with the senior author identified by an asterisk; include phone and fax numbers for the senior author. The paper's title should be concise and informative. Running headings are required; the left running heading is just authors' surnames. The right running heading should be an abbreviated title for the paper.

Abstract

The 'abstract' of a paper is intended to describe an author's summary of the paper, that is being published, and should be informative but brief. There should be no more than 300 words in the abstract. An abstract is not only to provide readers with a convenient summary but also to aid the work of abstracting journals, indexes and researchers. It should therefore contain a factual summary of the contents and conclusions of the papers, note any new information which the paper may contain, but should not include detailed information on methods or statistical data. We will return a manuscript with an abstract which is insufficiently detailed, or which contains too much detail, to the author for revision before it is accepted for publication.

Keywords

Beneath the abstract a list of 3-10 keywords or short phrases should be provided which will assist indexes in cross-indexing the paper.

Layout

The body of the paper need not necessarily follow the standard sequence of introduction, materials and methods, etc. However, if an original plan is used, authors should limit the level of headings to three, indicating in the margin of the hard copy the relative importance of a heading by the use of ringed capital letters, i.e., (A) for main heading, (B) for the second heading, etc. In an electronic text, use the first three heading levels.

Mathematics

We will reproduce complicated mathematics in *Exploration Geophysics* directly from the mathematics prepared by the author. Authors should submit their manuscripts in the usual way with mathematics contained in the text, supplied preferably in MS Word, but in addition should provide the editor with a clean copy of complex mathematics on a separate white A4 sheet typed in a 12 pitch face. (Any characters that are mathematical variables should be typed in italics with constants typed in roman.) Use Equation Editor 3 in MSWord for equation-setting; *Exploration Geophysics* editorial staff and printers cannot handle either LaTeX, or other products such as MathType, at this time.

References

References should follow the author (date) system. When reference is made in the text to a work by three or more authors, the first name followed by et al. should be used on all occasions. References should be listed in alphabetical order at the end of the paper in the standard form:

Blackburn, G.I., 1981, Seismic static corrections in irregular or steeply dipping water-bottom environments: *Exploration Geophysics*, **12**, 93–100.

Titles of journals should be abbreviated according to the latest edition of the World List of Scientific Periodicals.

Examples of forms for other citations can be found in the file `eg_sampler.doc`.

Tables, figures and illustrations

Complicated tables produced to appear in *Exploration Geophysics* should be produced in digital vector form, ideally in an illustration package such as Corel Draw 9, Freehand 10, or Illustrator 9. The file should be named to coincide with the table number. If colour is required in the table then the CMYK colour model should be used throughout, to be compatible with commercial four-colour process printing. Tables produced in MS Word or MS Excel will be accepted and converted as well as possible into one of the previously mentioned illustration packages. However, it is preferred that tables produced in these packages are printed to PostScript files.

Tables must be numbered with arabic numerals, containing a legend above each which will adequately describe the table for readers who do not refer to the text. Column headings should be brief, with units of measurement in

the column headings in parentheses. *Do not use vertical lines to separate columns.* In addition, authors should provide a PDF or hard copy of any tables.

All illustrations (including photographs) are classified as figures, and should be numbered consecutively. Illustrations should be produced in digital vector form using an illustration package such as Corel Draw 9, Freehand 10, or Illustrator 9. Illustrations produced in Microstation are accepted, provided they are exported to a five file CMYK EPS. If colour is required in the illustration then the CMYK colour model should be used throughout to be compatible with commercial four-colour process printing. Authors supplying illustrations that include raster images should ensure that the raster images are high-resolution (300 dpi) CMYK TIFF files wherever possible. Illustrations produced in any other software packages should be printed to PostScript files. For guidance, a raster image to be set at single-column width needs to be at least 1000 pixels wide; for full-page display the image should be 2500 pixels wide. Authors can contact the publisher for further information to assist in meeting these requirements.

Each figure should be supplied in a separate file. The file should be named to coincide with the figure number. PDFs or hard-copy prints should accompany any digital illustrations.

If an author is unable to meet any of the above listed requirements then high-contrast, high resolution hard copies (laser printed) of the original figures are acceptable, and will be scanned to high resolution *at the author's expense*. In this instance, the illustrations should be provided at 200% of the size to be used within the journal to obtain the best quality for printing.

Where possible, save space by designing figures to suit single column width, and by inseting titles, legends etc., rather than extending edges. Bar scales for maps and photographs are preferred to numerical scales.

Figure numbering should not be added to digital or hard copy figures and pictures. Hard copies of figures should be identified (by author and number) on the back in soft pencil. Figure captions should be supplied in a digital, word processing form and must be full and informative.

Colour figures are acceptable when essential to the paper. However, authors will be requested to pay a page charge of \$A400 per page for the printing of colour figures.

Abbreviations and units

SI units are preferred. Statistics and measurements should always be given in figures e.g., 10 mm, except where the number begins a sentence. When the number does not refer to a unit of measurement, it is spelt out, except where the number is greater than nine. Confusing mathematical notation, and particularly subscripts and superscripts, should be avoided; negative exponents or the use of a solidus (i.e., a sloping line separating bracketed numerator and denominator) are acceptable as long as they are used consistently. The words 'Figure' and 'Table' should be capitalised (first letter) and spelt in full, when referred to in the text.

Page proofs

Page proofs (as PDFs) only will be sent to authors and **they must be returned to the Editor within three days of receipt**. Major alterations to the text and illustrations are accepted only when absolutely necessary. The additional costs for making these changes will be charged to the author(s).

Offprints

A final version of the paper will be supplied free of charge to authors on CD-ROM as a high-resolution PDF file. Hard copies may be purchased and should be ordered when proofs are returned. The CD-ROM and hard copies (if ordered) are sent out about three weeks after publication.
